I build web products end to end, connecting product decisions with backend, data, interfaces, testing and operations.

PROFESSIONAL EXPERIENCE

Mar 2026 — Present	DELSUD · Full Stack Developer Full-stack development across a CMS, multisite portals and marketplace backend: APIs, data, authentication, integrations and interfaces.
Feb — Mar 2026	DATAMARK · Fullstack Lead & Full Stack Developer B2B MVP for sales, inventory, customers and analytics with a layered backend and PostgreSQL.
Sep 2023 — Apr 2026	Burgers Thrones · Founder & Operations Lead Operations, stock, customer service and data-supported business decisions.
2019 — 2023	Grupo MSA · Production & QA Technician Functional hardware and software testing, diagnosis and critical defect reporting.

SELECTED CASES

MineCall Voxel virtual office with persistent worlds, presence and proximity audio/video. Responsibility: I designed and built a substantial part of the full-stack platform: Go API, data, realtime, media, Control Center and web experience. Limits: The previous demo URL returns 404 as of 2026-08-25. The published video is explanatory, not a recording. Real OAuth and tiered rollout remain environment-dependent.	EI Editor Multisite editorial platform for content, permissions, media and portal publishing. Responsibility: I developed backend, React CMS and public portal capabilities across data, authentication, RBAC, media, publishing and integrations. Limits: Existing PNG files remain withheld for privacy. The diagram explains architecture and represents neither an interface nor operational data.
--	--

Chichitos

Storefront for personalized children clothing with a catalog and configurable detail.

Responsibility: I built the product end to end, focusing on architecture, catalog, public experience, administration and deployment.

Limits: No persistent cart, completed payment, sales or multiple active variants are claimed. Screenshots prove only the visible public interface.

CAPABILITIES

Backend and data

Node.js · NestJS · Go · PostgreSQL · Redis

Full-stack interfaces

TypeScript · React · Next.js · Astro · Expo

Quality and operations

E2E · contracts · CI · observability · rollback

ADDITIONAL WORK

Elementos · Private product

Modular backend and contract design and implementation.

Chemical Software · In development

NestJS backend, multitenancy, inventory, migrations, OpenAPI and E2E.

CercaYA · MVP in progress

Product and engineering work across contracts, requester app and security boundaries.

Content updated: August 2026.
